PRESS RELEASE

Berlin | August 19, 2020 | P222

Contactless IP Door Station DoorBird D2101WV

The new contactless DoorBird IP video door station supports the worldwide fight against COVID-19. The model D2101WV has a special sensor technology for contactless ringing developed by Berlin-based manufacturer Bird Home Automation.

In the midst of the current pandemic, DoorBird has developed an IP-based door station that meets the demands of our changing world. DoorBird's new D2101WV model enables contactless ringing, protecting health and increasing safety. Visitors, customers and patients can no longer come into contact with viruses and bacteria by touching the doorbell. Buildings with a high number of visitors, such as hospitals, kindergartens, medical offices and other office buildings, can all benefit from this contactless door intercom as it can help contain the spread of the Coronavirus.

The integrated module with a special sensor technology detects gestures, such as waving and approaching of the hand, at a distance of 10 centimeters and triggers a bell signal at an IP chime or indoor station. The hand gesture can also trigger a preconfigured relay which then opens the door automatically. Other actions can also be performed, for example, sending a push notification to the homeowner's smartphone or an HTTP(S) call to a building automation system, or initiating a SIP call.

The modern IP technology also enables communication with visitors via mobile devices. Homeowners can see live video of the entrance area, talk to their guests and open the door from their smartphones and tablets via the DoorBird app. With the DoorBird D2101WV, the contactless access solution has thus become a reality. The smart door intercom will go into series production in fall of 2020 and can be pre-ordered now.

About Bird Home Automation Group

The Bird Home Automation Group develops, produces and markets high-quality IP video door intercoms under the trademark "DoorBird" around the world. The company's headquarters and production plant are located in Berlin, Germany, with a further office in San Francisco, USA. "DoorBird" stands for the combination of exclusive design with the most innovative IP technology in the field of door communication. The products are made from corrosion-resistant precious metals and manufactured in Germany according to the highest quality standards. For more information, visit www.doorbird.com.
